Saltc. refers to saltconcentration below or above 1 o/oo and thereby presence of teredo navalis • The matrix provides information on which species are avaliable with FSC certificate and would normally be suggested • The Matrix takes avaliablity, price level, dimensions and properties into consideration and is practical guidance. A succesful result will still require proper handling, installation and maintenance. This is still a responsibilty of the users • The Matrix is under constant development , find an updated version at www.tra-cer.com
